

# ProModel License Manager

---

This document explains the features and environment included in the ProModel Corporation License Manager dialog. The License Manager functions as a container for licensing key information for any ProModel product operating on your system.

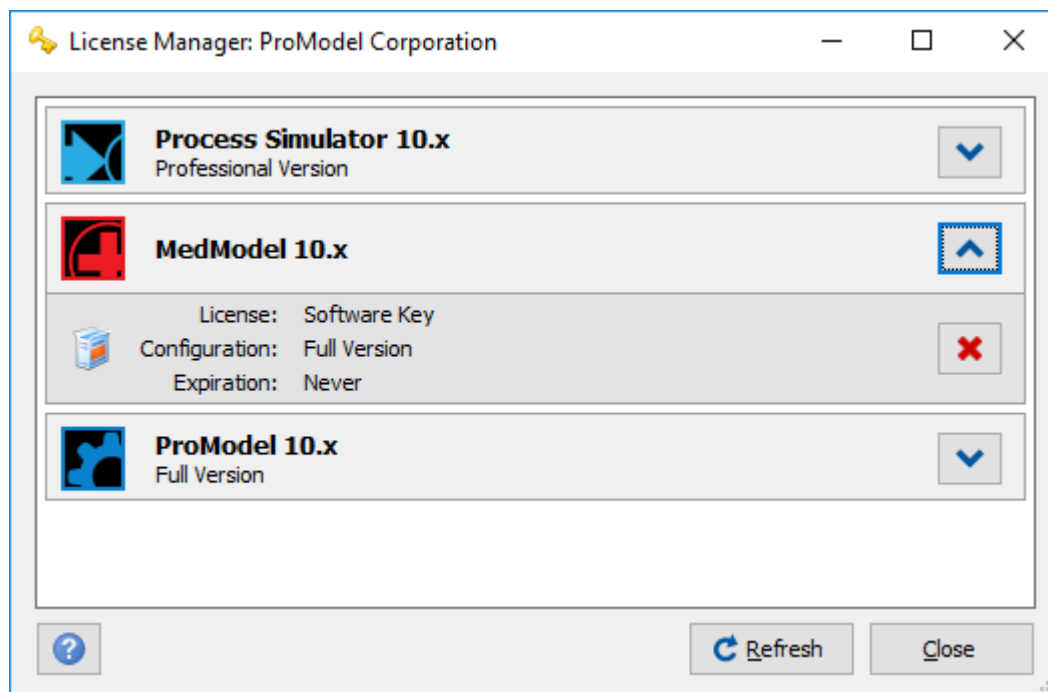

The dialog features:

- ProModel Keys list
- Help
- Refresh
- Close

## ProModel Keys list

The primary function of the License Manager is to list all the ProModel products with licensing keys operating on your machine and provide you with any licensing and version information about that product. To view this information, click on the **Expand** button to the right of the product's name.

Expanding the list will display License, Configuration, Expiration and Termination information about your product.

### License

The License line will display what type of license key is operating for the selected product. Licensing key options are Software Key, Network Key, USB Key, or Unknown.

### Configuration

The Configuration line provides information about version status the product is currently operating on your machine. Versions include, Full Version, Trial, and Unknown.

### Expiration

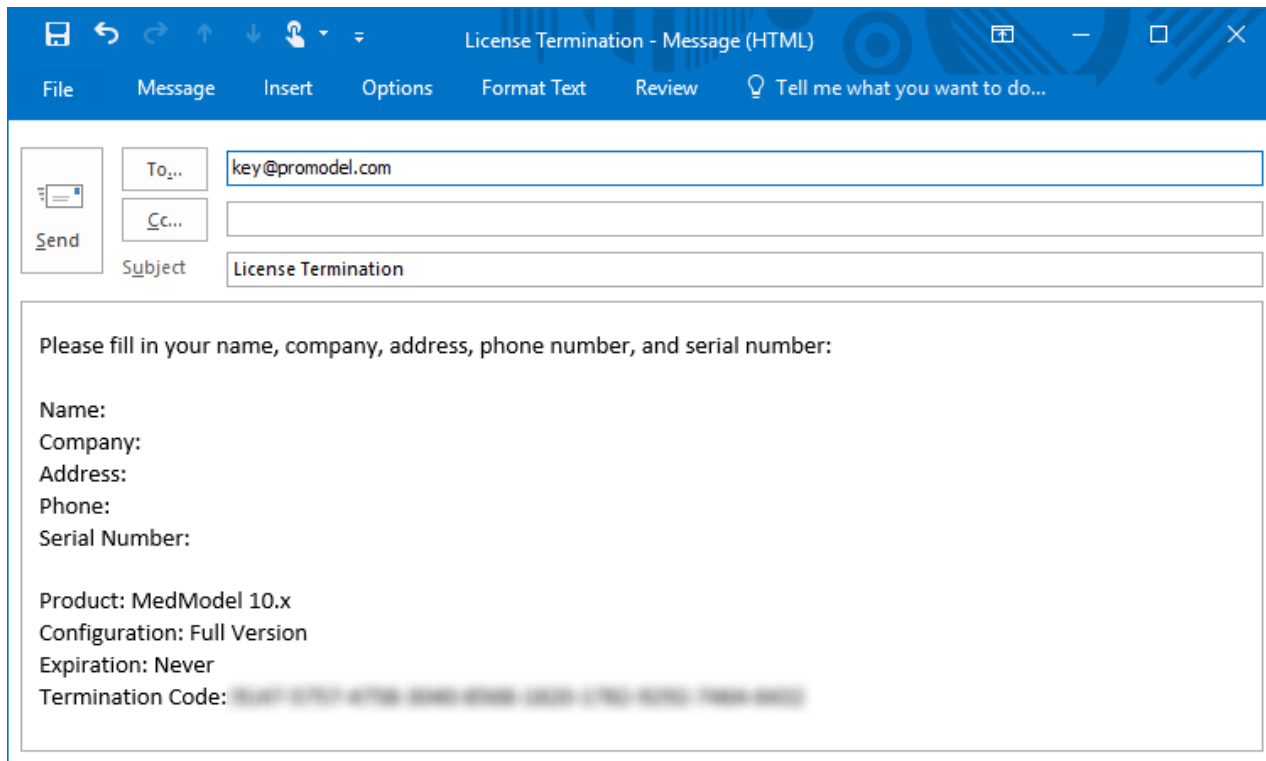

The Expiration line provides the date of expiration for your license key, if your license key is expired, expiration grace period or how many days until your license key will expire.

### Terminate Button

To the far right of the licensing information is the Terminate Software Key button. To remove your software key for a ProModel product, select this button. When the Terminate Software Key button is selected, the following warning dialog will appear:

License Termination - Message (HTML)

File Message Insert Options Format Text Review Tell me what you want to do...

To: key@promodel.com

Cc:

Send

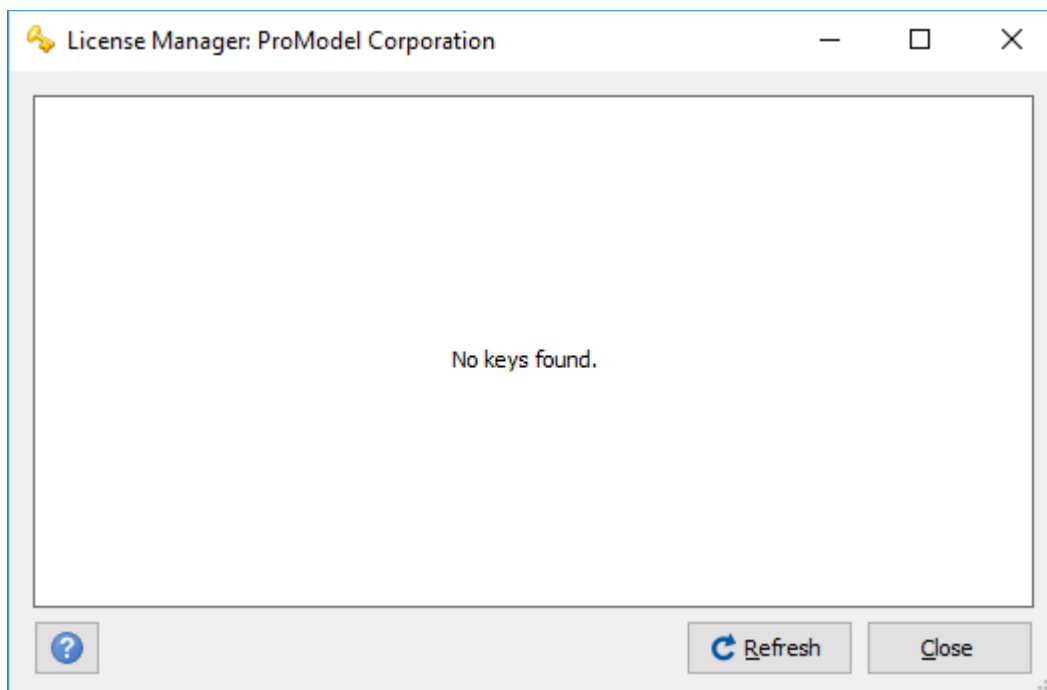

Subject: License Termination

Please fill in your name, company, address, phone number, and serial number:

Name:  
Company:  
Address:  
Phone:  
Serial Number:

Product: MedModel 10.x  
Configuration: Full Version  
Expiration: Never  
Termination Code: [REDACTED]

When your computer no longer has license keys for ProModel software, License Manager will appear as below:

## Refresh

By selecting Refresh, the License Manager will refresh, check for any keys, and display the latest ProModel license information.
